

ABSTRACT OF THE DISCLOSURE

An appliance is provided for capturing and communicating images to other devices with communication capabilities. An embodiment of the capturing and viewing appliance comprises displaying a page on a display, the page corresponding to one of a plurality of image data, the plurality of image data each being contiguous members of a group; displaying a flipping animation on the display in response to operating a navigation button; and displaying a new page on the display upon conclusion of the display of the flipping animation, the new page corresponding to another one of the plurality of image data.
